

El Paso Electric 2017

Small Commercial Solutions Program Executive Summary

The Small Commercial Solutions Program provides support to eligible El Paso Electric Small Commercial Customers and Participating Contractors. The Program does not prescribe technologies or end uses, but instead provides a framework through which the participant can receive technical assistance and cash incentives for implementing and installing a wide range of measures.

El Paso Electric offers \$400/kW cash incentive for reduced peak electric demand.

The Programs provide some combination of the following assistance to Participating Contractors:

- **TECHNICAL ASSISTANCE** to help identify and evaluate energy-efficiency opportunities. This includes assessment of the mechanical and electrical equipment of renovation and new construction projects through quantification of energy consumption (kWh) and peak demand savings (kW).
- **COMMUNICATIONS SUPPORT** to help publicize the Participating Contractor and participant's leadership and accomplishments in energy efficiency.
- **CASH INCENTIVES** are available for Participants through a Participating Contractor for new construction and renovation projects that reduce peak electric demand.

Qualifying projects include but are not limited to:

- Indoor and Outdoor Lighting
- HVAC Tune-Ups
- Roofing
- Window Treatment
- Strip Curtains for Walk-in Refrigerated Storage
- ENERGY STAR® Food Service Equipment

Please contact an El Paso Electric or CLEAResult representative if you have any questions or for more information on enrolling your qualified contractor or to self sponsor. Thank you for working with us to save energy and money.
